Seamless inspection operations from beginning to end with A365

A365 facilitates the implementation of digital inspection processes that streamline operations to achieve higher efficiencies. It powers the digital transformation of online and offline inspection activities, helping your business improve productivity and reduce costs.

A365 brings technical excellence, business insight, productivity, and compliance to the entire inspection operations with minimal investment or risk. It improves efficiency and refines how your service centers communicate with customers making the entire inspection process effective and time-efficient for both the customer as well as across your truck and bus business.

01

Manage and perform inspections with or without vehicles as the subject using historical data from the vehicle

02

Record observations for vehicles during pre-delivery inspections (PDI) or whenever needed

03

Define checklists quickly and consistently from reusable checkpoints

04

Set rules to reduce risk and effort to drive compliance by guiding users during inspection entry with embedded follow-up actions
